ABOUT THE PROJECT

The AT&T Business Customer Advocate (BCA) SaaS solution is a cloud-based platform that provides AT&T business customers with a single point of contact for all of their customer service needs. The BCA SaaS solution integrates with AT&T's legacy applications, to provide customers with a seamless experience.

The BCA SaaS solution has several key UX benefits for AT&T business customers, including:

- **Simplicity: The BCA SaaS solution is designed to be simple and easy to use. Customers can access the solution from anywhere, and they can quickly and easily find the information or assistance they need.**
- **Transparency: The BCA SaaS solution provides customers with transparent information about their account and their service. Customers can see their bill, view their usage history, and track their orders.**
- **Personalization: The BCA SaaS solution is personalized to each customer's needs. Customers can create their own profile, and they can choose the level of service that best meets their needs.**
- **Responsiveness: The BCA SaaS solution is responsive, which means that it can be accessed from any device, including smartphones, tablets, and laptops.**
- **Security: The BCA SaaS solution is secure, and it complies with all applicable privacy and security regulations.**

DESIGN PROCESS

We followed a user-centered design process, starting with user research and user personas to understand the needs of the customers. We conducted user interviews to gather feedback on the existing experience and to identify pain points and areas for improvement.

THE PROBLEM

AT&T's Customer Advocate Platform aims to provide businesses with a high level of customer service and support, helping them to maximize their use of AT&T's products and services. However, despite the platform's benefits, there are several problems that the Customer Advocate team may encounter:

Lack of visibility: One problem with the platform is that some businesses may not be aware of its existence or the services it provides. The Customer Advocate team needs to ensure that businesses are aware of the platform and how it can help them.

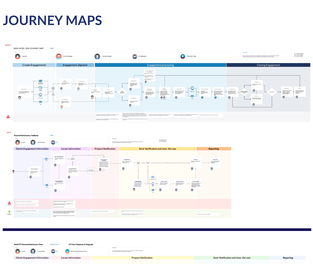

Difficulty with legacy systems: Another problem is that businesses may have legacy systems that are not easily integrated with the Customer Advocate platform. The team may need to provide additional support to help businesses transition to the platform.

Complex needs: Some businesses may have complex needs that require customized solutions. The Customer Advocate team needs to be able to understand these needs and provide personalized support to each business.

Time constraints: If businesses may need quick solutions to their problems, and the Customer Advocate team needs to be able to respond quickly and efficiently to meet these demands.

Overall, the Customer Advocate Platform is designed to provide businesses with a high level of customer service and support. However, the Customer Advocate team must be aware of these potential problems and work to address them in order to provide the best possible experience for their customers.

INFORMATION ARCHITECTURE

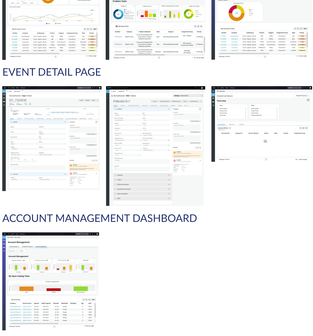

The information architecture of AT&T's Customer Advocate Platform refers to the organization and structure of the platform's content and features. It is the framework that supports the platform's usability and enables users to find the information they need quickly and easily.

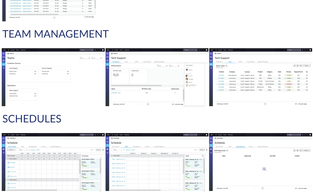

USER PERSONAS

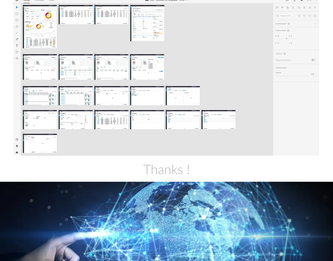

> By defining and identifying these personas and their scenarios, the Customer Advocate team can better understand the needs and expectations of its users, designing a platform that meets those needs more effectively.

JOURNEY MAPS

THE SOLUTION

Different solutions were developed for a SAAS platform where they allow account management, information processing and ticket and case management, access to support resources quickly and easily, and problem escalation management.
